DETAILED ACTION

Allowable Subject Matter

Claims 1, 3-5, and 7-20 are allowed.

The following is an examiner's statement of reasons for allowance: Independent claim 1 recites upsampling a first digital audio signal, low pass filtering the upsampled audio signal, and downsampling the filtered audio signal to produce a second digital audio signal, including performing linear interpolation between the filtered samples of the filtered audio signal using an accumulated linear interpolation ratio that is based on a current downsampling factor and a current phase of the second digital audio signal. Prior art references Lin and Hodges do not disclose linear interpolating between filtered samples of the filtered audio signal. Newly cited reference to Camagna et al teach sample rate converter comprising upsampler 36, low pass filter 38, and sample selector/interpolator 40 which uses the phase of the output digital signal.

However, Camagna et al do not disclose using an accumulated linear interpolation ratio.

Regarding independent claim 7, the art of record does not disclose nor suggest low pass filtering by applying samples of the first digital audio signal to at least two phased subsets of a plurality of phased subsets of filter coefficients to generate at least two filtered samples. Regarding claim 11, the references of record do not disclose generating an accumulated linear interpolation ratio.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
